

The GKL Group, as sole UK distributor, is delighted to be exhibiting the Zimmerman Industries Inc. Zim-Mixer, volumetric concrete mixer.

The Zimmerman volumetric mixer shown is displayed mounted on a lorry chassis, however, the mixers can easily be mounted upon trailers or a stationery-skid to cover all applications and requirements.

Building upon 40 years of experience, and the knowledge obtained from being the original volumetric mobile mixer inventor, Zimmerman Industries has developed a patented independent chain feed delivery system which is standard on all units and includes a 3 year or 6,000m³ warranty.

GKL working in partnership with Zimmerman Industries Inc.

ZIM
MIXER®

Delivering precise volumes of concrete mixed to your specific requirements

Applications

- Zim-Mixers® are being used all over the world in many applications. The most common usages are listed below
- There are many more possible uses of a Zim-Mixer® - the sky really is the limit.

Construction

- Zim-Mixers® are being used worldwide to supply concrete for foundations, floor slabs, walls, structures, trench reinstatements and many other general applications throughout the building and construction industry.

Local Authorities

- Zim-Mixers® are purchased by local authorities to supply concrete for their own use - this allows for better cost control of materials and labour usage.
- Common uses include: kerbs, footpaths, foundations and remedial repairs.
- Utility and other trench reinstatement works with “foamed” concrete is another common use.

Precast

- Zim-Mixers® produce quality high performance concrete for the precast industry.
- Polycarboxylate admixtures may be used for SCC (self consolidating concrete).

Residential

- The Zim-Mixer® supplies large volumes of concrete to the residential sector.
- Foundations, slabs, walls, kerbs, pavements, driveways, decorative, and stamped concrete are typical applications.
- Concrete, gunite, shotcrete are also used for hot tub and pool installations.

Specification

- Zim-Mixers® are used to supply Latex Modified Concrete, Rapid Setting Concrete, Iowa Low Slump Concrete, Roller Compacted Concrete, D.O.T. concrete, Pervious Concrete, Soil Stabilization Concrete and many others.
- Fly Ash, Slag, Silica Fume, and other pozzolans may be blended into the mix.

Advantages of a Zim-Mixer

- Positive feed delivery system
- Individually dispensed aggregate
- Tailored grade and volume
- No sand or stone spillage
- Low maintenance costs
- Chain feed has a market leading 3-year or 6,000m³ warranty
- Operator training and after sales support provided by GKL
